To.

Editor in Chief

International Journal of Integrated Health and Science

Dear Sir,

Please find the submission of our manuscript,

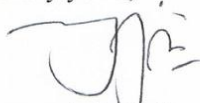

THE RELATIONSHIP BETWEEN C677T METHYLENETETRAHYDROFOLATE REDUCTASE (MTHFR) GENE POLYMORPHISM WITH HOMOCYSTEINE IN CEREBRAL PALSY

which we would like to submit for publication in the International Journal of Integrated Health Science. Herewith, we also attached *3 sets of manuscript (hard copy) and 1 CD (soft copy)*.

In this manuscript, we want to see the relationship between MTHFR C677T gene polymorphism with homocysteine levels in CP children. The C677T MTHFR gene polymorphism is one of the genetic factors that contribute to CP. Defects in this gene lead to an increase in homocysteine that neurotoxic and therefore contributes to prognosis of CP. Until now there has been no research on the correlation of C677T MTHFR gene polymorphism with homocysteine levels in CP children.

Author and all co-authors have seen and agreed with the contents of the manuscript and there is no financial interest to report. We certify that the manuscript submitted is an original work and is not under review at any other publication. We thank you for considering our manuscript for publication in the International Journal of Integrated Health Science and look forward to hearing from you at your earliest convenience.

Sincerely yours,

Uni Gamayani, dr. SpS
